

## Leverage the power of CallSwitch to make Teams talk properly.

With CallSwitch for Teams your business can leverage our powerful CallSwitch infrastructure and features to provide an enhanced voice solution for your Microsoft Teams users.

### **Key Features**

Make and receive voice calls from within the Microsoft Teams softphone.

IVRs & intelligent call routing.

Integrated call recording with secure storage.

Voicemail to email transcription.

Wide range of supporting desk phones & conference devices.

Enterprise-grade voice network resilience.

Geographical numbering available in over 65 international destinations.

Optional integration with our Atmos compliance suite.

Generous inclusive call bundles.

Simplified porting and provisioning carried out by our in-house UK team.

# CallSwitch

#### **Endpoint Flexibility as Standard**

Whether you are currently using CallSwitch Communicator and have a longer-term UcaaS strategy for Microsoft Teams, or already use Teams and need a robust solution for voice, CallSwitch for Teams delivers a host of benefits to your chosen unified communications endpoints.

#### **Maximising Productivity**

By voice-enabling Microsoft Teams with CallSwitch for Teams, employees continue using the soft client and interfaces they are familiar with, and as the solution is fully embedded, there's no requirement to click-out to other diallers or consoles when making a call.

#### **Industry Leading Benefits**

CallSwitch for Teams is the answer to voiceenabling your Teams users in a world where the alternatives are third-party Direct Routing or Microsoft's own Calling Plans – solutions that offer basic functionality, minimal carrier resilience, and limited geographical availability.

#### **Advanced PBX Features**

In contrast, CallSwitch for Teams delivers all the benefits of our CallSwitch platform – including intelligent call routing, native call recording (with options for compliance), enhanced resilience, international numbering, generous inclusive call bundles, and UK based provisioning and support.
